

What is it?

Paternity and maternity tests prove biological parenthood.

When should I use it?

A paternity or maternity test can be used to establish the parenthood of an individual for a court case such as child support or child custody. The test can also be used to support placing a parent's name on a birth certificate.

LabCorp places the highest emphasis on following legal chain of custody with your sample, so your sample will be valid evidence in a legal setting. We employ the latest technology to provide the most accurate results for you. Our highly accurate tests exclude, on average, 99.99% of non-fathers. We provide safe, secure, and efficient transportation of your samples.

What kind of sample is tested?

The most common sample type is a buccal swab. This sample is collected using a cotton swab that is gently rubbed on the inside of your cheek. Blood samples are also acceptable.

How do I purchase?

Click Order Now below to fill in the basic information needed to process and schedule your test. You will need the following key information:

- Names of the children and adult(s) who will be involved in the test (for example, a paternity test needs to test the mother, alleged father and the child who needs paternity proof; other relationship tests have varying requirements)
- Current contact information for all parties involved
- A return address or email for the results
- Credit card for payment

FEES:

3-Party Testing (mother, child, alleged father)

\$525

[Order Now](#)

2-Party Testing (child, alleged parent)

\$525

[Order Now](#)

Additional test participants: \$175

SCHEDULE A TEST:

After your order is confirmed and payment is processed, one of our representatives will follow up to schedule your specimen collection. We have more than 900 LabCorp-operated facilities in the US, and contract with more than 10,000 locations globally. We will work with you to find a convenient location for sample collection.
